From Evidence to Everyday Support: Rethinking ADHD in the Workplace

The Problem: The project seeks to address gaps in practical workplace support for adults with ADHD who face challenges with task management, stress regulation, and workforce participation.

PART 1: Bibliometric Analysis of Existing Literature

Economic burden of attention-deficit/hyperactivity disorder: a bibliometric and thematic analysis

Journal of Public Health (2026)

Objective

To examine how the global research community understands the economic burden of ADHD, and where the research gaps still limit policy and practice

Method

Bibliometric and thematic analysis

Main Findings

Though scientific literature has grown in recent years, they remain geographically concentrated and more focused on pediatric than adult ADHD.

PART 2: ADHD Support App

Based on the bibliometric analysis, the research team is developing a workplace-focused ADHD support app for adults.

- Users can
  - break tasks into smaller steps,
  - organize work by priority or recency,
  - receive supportive guidance when mistakes occur,
  - avoid panic through structured coping prompts.
- A panic button is being developed to connect users with expert when immediate support is needed.

Image: Employee dashboard, showing priority-based tasks, manageable task steps, focus timing, and progress tracking.

Current Status: The prototype is currently being reviewed with employers who employ people with ADHD.
